## 滑臂 Sliding arm

挖掘机滑臂是由由上滑动臂与下固定臂两部分构成，通过伸缩缸的伸缩来推动上滑动体前后自由伸缩，适用于地铁、顶管、沉井的挖掘。首创的双限位设计，减少滑臂的运行振动，提升油缸的使用寿命；滑动装置由以前的滑轮设计更改为滑块设计，降低故障率，同时采用的耐磨橡胶滑块更加容易更换与维护。

The excavator boom is composed of an upper sliding arm and a lower fixed arm. The upper sliding body is freely extended and retracted by the telescopic cylinder, which is suitable for the excavation of subways and pits. The pioneering double-limit design reduces the running vibration of the boom and improves the service life of the cylinder. The sliding device has been changed from the previous pulley to the sliding block, which reduces the failure rate, and the wear-resistant rubber sliding block is more easily replaced and maintained.

挖掘机滑臂是由由上滑动臂与下固定臂两部分构成，通过伸缩缸的伸缩来推动上滑动体前后自由伸缩，适用于地铁、顶管、沉井的挖掘。首创的双限位设计，减少滑臂的运行振动，提升油缸的使用寿命；滑动装置由以前的滑轮设计更改为滑块设计，降低故障率，同时采用的耐磨橡胶滑块更加容易更换与维护。

The excavator boom is composed of an upper sliding arm and a lower fixed arm. The upper sliding body is freely extended and retracted by the telescopic cylinder, which is suitable for the excavation of subways and pits. The pioneering double-limit design reduces the running vibration of the boom and improves the service life of the cylinder. The sliding device has been changed from the previous pulley to the sliding block, which reduces the failure rate, and the wear-resistant rubber sliding block is more easily replaced and maintained.
